

Connectivity

*** most of our customers know where they want to go, but not always how to get there**

Most of our customers know what they want to achieve and what they need to resolve, but they often need help turning that vision into reality. At Interoute we have all the network and platform infrastructure to help you realise that vision. Plus we have an in-house Solutions team, who'll work alongside you to combine these elements into the optimum configuration to make the solution you need a reality.

Why Interoute. You need a network that covers the right geography, to connect the places you want. You need your voice and data network to be resilient, diverse and secure. You need it to be fit for purpose – big where it needs to be big, skinny where it needs to be skinny and flexible where it needs to be flexible. And you need it delivered fast.

As today's businesses expand into new and emerging markets our customers are looking for better ways to keep their business communities connected.

Our Voice and data network spans Europe and beyond, keeping customers connected to established and emerging business centres. It ranges from Stockholm to Dubai and New York to Sofia. We built our network from the ground up to ensure it was based on only the most advanced technology available. There's no legacy technology in it at all.

As it's wholly owned by us we make sure that security is built into the network to keep your data protected. And we have 2 fully redundant Network Operations Centres in Europe where we constantly monitor and control the network to keep it that way. We're constantly reinvesting to make sure we can meet the demands of businesses now and in the future. In 2006 alone we invested 22 million Euros to upgrade the entire network creating a backbone of 100 – 800GIG capacity. As of the beginning of 2007, our pan European network could support the entire Internet if it needed to.

Thanks to this upgrade we are able to offer customers the fastest delivery times for 10G waves and 10GIG Ethernet in Europe.

Delivery to selected sites is within 10 days, compared with the four to eight week lead times other operators are offering as standard.

We have been supplying every major incumbent carrier in Europe for many years and enable our enterprise customers to benefit. We have all the protocols to fit today's business applications in one pan European voice and data network. Interoute's Wavelength and SDH products provide you with high capacity high reliability connections across our European footprint, Combining the long established user friendly Ethernet interface with Interoute's unparalleled European footprint and range of available capacities provides you with a powerful cost effective inter-office connectivity solution. Off-site data storage is a hot topic for IT managers and Interoute can provide you with a range of storage connectivity solutions that cover mission critical synchronous data storage with Fibre Channel and Ficon services, through to Asynchronous solutions with Ethernet and SDH solutions.

Managed Ethernet

Our layer 2 Ethernet Service now includes an option for managed CPE, enabling Interoute to proactively manage, monitor and guarantee the service right up to your premises (including any 3rd party access circuits). Performance statistics collected from the CPE are available on the Interoute Hub website providing confirmation of service performance and cost effective use of bandwidth. Billing can be fixed or usage based or a combination of both.

Benefits at a glance

Simplicity – you only have to deal with one pan European supplier for all your connectivity needs and you only have to call one phone number if you need action.

Flexibility – future proof your decision, expand your network wherever and whenever you need or contract it if circumstances change.

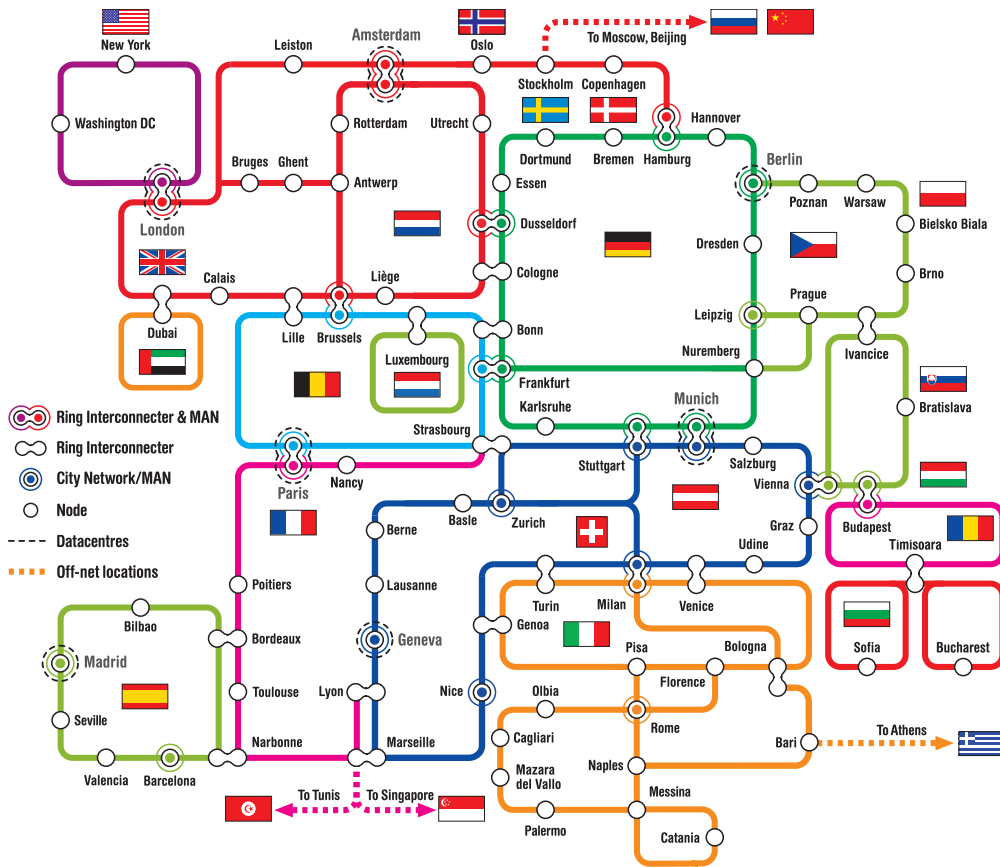

Choice – the Interoute connectivity portfolio covers the entire scale of price and quality options. So you can match the level of service you need, with the the price you want to pay.

Speed – our Rapid Delivery Bandwidth product delivers 10gbs in 10 days between the Infinera PoPs on our core network. So if you need a fast solution, we can provide it.

The Solutions team

Our in house solutions engineers will work with you to make sure you have exactly what you need for your business. They'll make sure the solution we provide helps you to reduce costs overall (including reducing point to point costs). They'll recommend the optimal Customer Premises Equipment (CPE) options, advice on how to aggregate services and the best resiliency options. As well as ensuring a smooth transition to get you up and running.
