

## INTERROUTE VIRTUAL DATA CENTRE

### Interoute Scalable Storage – Dedicated NetApp

**Avoid unnecessary bandwidth cost with scalable storage from Interoute.**

**Interoute Scalable Storage (ISS) is Interoute's cloud storage product for businesses who want to access highly functional storage capabilities without investing in the infrastructure.**

Our ISS Dedicated service gives you a flexible storage platform that leverages the cost effectiveness of cloud computing, while simultaneously maintaining direct administrative control and resource management of the underlying partitioned dedicated storage. ISS Dedicated offers you a dedicated block of storage which is enabled through the use of NetApp's proven enterprise custom Storage Virtual Machine™. ISS Dedicated provides all the functionality of a Storage Area Network (SAN). It can become core to your enterprise storage needs, including Disaster Recovery, on-demand scalable storage and fast backup/restore.

With Interoute's cloud storage services, you can supplement your own private cloud and storage with industry leading storage and Interoute's pan-European MPLS-based network. These resources can help you avoid and/or minimise the bandwidth costs and overheads often associated with cloud storage solutions.

Because ISS Dedicated NetApp is a dedicated NetApp Storage Virtual Machine™ built into Interoute's secure MPLS network, not only does it offer a range of high bandwidth connectivity options, but also inherently provides you with advanced network-level security. Using ISS Dedicated, you can exploit NetApp features such as replication from an existing NetApp device\* or introduce fault-tolerant clustered cloud solutions, all built and controlled from within the Interoute Virtual Data Centre Infrastructure-as-a-Service (IaaS).

#### Key Benefits

- Trusted technology and features based on NetApp Storage Virtual Machine™
- Integrates with your existing NetApp estate
- Accelerates time to market for your business
- No bandwidth costs\*\*
- Increases your data protection options with affordable disk, based on backups and/or Disaster Recovery

#### Features

- Dedicated IP space
- Data ONTAP® 8
- SSH access
- CIFS, NFS, iSCSI, FTP protocols
- All volume options
- De-duplication
- Key Management, Radius, Sectrace
- Snapshots
- SnapManager
- SnapVault

#### Pricing

- One-off setup fee: €1,000
- Monthly per GB: From €0.10 (minimum 10TB commit)
- NetApp licensing: on request
- Bandwidth charge: ZERO\*\*\*

\* Subject to NetApp licensing requirements. \*\* For customers who are on-net to Interoute \*\*\* Excludes all charges external to the Interoute network. For more information please go to [cloudstore.interoute.com](http://cloudstore.interoute.com)
